

# BRAIN BUSTER- PUZZLE 3

Hello,  
Friend!

## A Symptom of Dementia:

### Loss Of Self Reflection

People who are diagnosed with dementia go through many stages. One of those is not being able to recognize themselves when faced with their own reflection. The person they see is a familiar friend someone they see on a daily basis. However in the later stages of dementia, this person's reflection can become a stranger which makes it difficult to get your person with dementia to do simple tasks as having a shower or getting dressed.

*How would you feel about getting undressed in front of a stranger?*

## Brain Teaser

Can you take three letters away from a four-letter word and manage to have it mean the same thing?  
What is the word?

The answer for this puzzle will be sent out with next weeks puzzle.  
Good Luck!

## Puzzle 2 Answer- Johnny
